

2025 Technical Bulletin – 01
21 May 2024

Briggs LO206 Carburetor Emulsion Tube Nozzles are being identified with an undersized section partway through the nozzle when measured from the top of the carburetor down.

It is recommended that all Briggs LO206 carburetors be measured against the 0.101 go/no-go gauge. If an issue is found, a 0.101 reamer (or a similar device) may be used to bring the nozzle into compliance.
